We Were Right!

Some years ago we anticipated that the demand for deciduous trees would ultimately trend toward a quality superior to the ordinary nursery run.

With this end in view we carefully selected specimens as nearly as possible perfect and lined them up, giving ample space for full natural development, the result being that today we are in the almost unique position of being able to offer in sufficient quantities for avenue plantings, or individual specimens, unusually fine, well matched trees in the following varieties:

ACER platanoides (Norway Maple), 4 to 7 in. caliper.

ACER saccharum (Sugar Maple), 3 to 5 in. caliper.

AESCULUS hippocastanum (Horse Chestnut), 3 to 5 in. caliper.

CORNUS florida (White Flowering Dogwood), 8 to 12 ft. high.

FAGUS sylvatica (European Beech), 10 to 18 ft. high.

FAGUS sylvatica heterophylla (Fern-leaf Beech), 12 to 18 ft. high.

FRAXINUS americana (White Ash), 3 to 4 in. caliper.

TILIA cordata (European Linden), 3 to 5 in. caliper.

All of the above are emphatically endorsed by the many nurserymen and landscape architects who repeatedly visit us.

We invite your inspection, and will gladly answer any inquiries.
